

(Senior-) Fullstack Developer (Angular)

Full-time

Since we are a young startup, you have the unique opportunity to shape our platform and its architecture with us. It is our goal to create a Software-As-A-Service platform in the field of digitalization and business processes for small and medium enterprises. We place great importance of a stable and open platform realized with modern technologies. You would work in a small, young and international team.

Your Tasks

- Independent realization of business requirements
- Design and development with regards to the target architecture
- Technical discussions and elaboration of different solutions as a team

Your Skills

- Good communication skills in the English language are mandatory: Please provide your application in English
- Good academic degree (Bachelor/Master) with a technical or economics degree (preferably in computer science)
- Deep knowledge and practical experiences in Angular
- Understanding principles of structured software architecture
- Understanding of web development, client server architecture
- Knowledge and experience with development and consumption of REST APIs
- Safe handling of common development tools such as Git, Maven, Jenkins, JUnit

Optional

- Knowledge and experiences in Java development
- Experiences with Spring and Spring Boot
- Basic database knowledge (MySQL, indices, optimization)

Our offerings

- Start-Up Feeling
- Very agile SCRUM-based environment
- Complete infrastructure for an effective virtual collaboration: VPN, Continuous Delivery, Git, Confluence, Jira
- Appropriate salary with very good chances to grow with us as an early joiner
- Regular team building events

Please provide your application in English
